Introduction

Virtualisation is being implemented by many organisations and the IT Support Network Manager of Red Opal Innovations, Terrence Stewart, is interested in exploring the possibility of introducing virtualised servers at Red Opal Innovations.

As a preliminary measure before any further work is done, a survey was undertaken by the IT Support department. The IT Governance Group and other relevant staff members were surveyed to obtain their opinions and to determine the perceived positives and negatives of an infrastructure change and virtualised servers. This report presents the results of that survey.

The benefits of virtualisation

Chart 1: Positive impact of virtualisation on costs, availability, security and sustainability

Chart 2: Relationship between virtualisation and ROI Strategic plan

Chart 3: Perceived benefits of implementing virtualisation

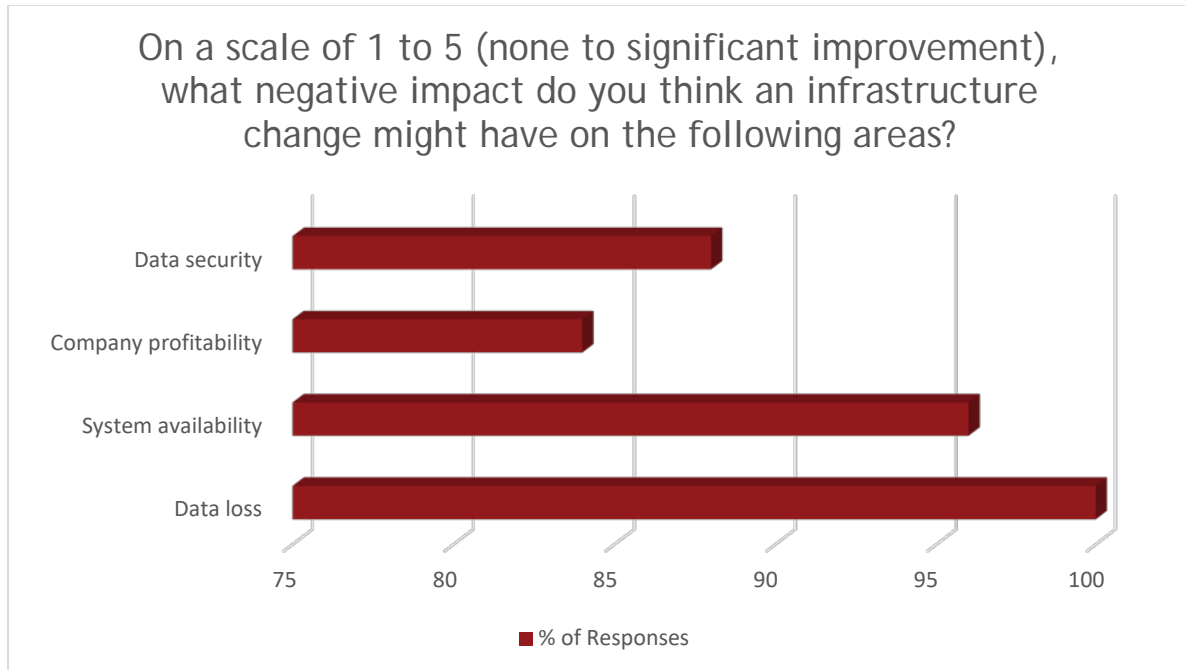

Chart 4: Stakeholder support of virtualisation

Changing infrastructure

Chart 5: Negative impact of change on data, availability and profits

Additional responses

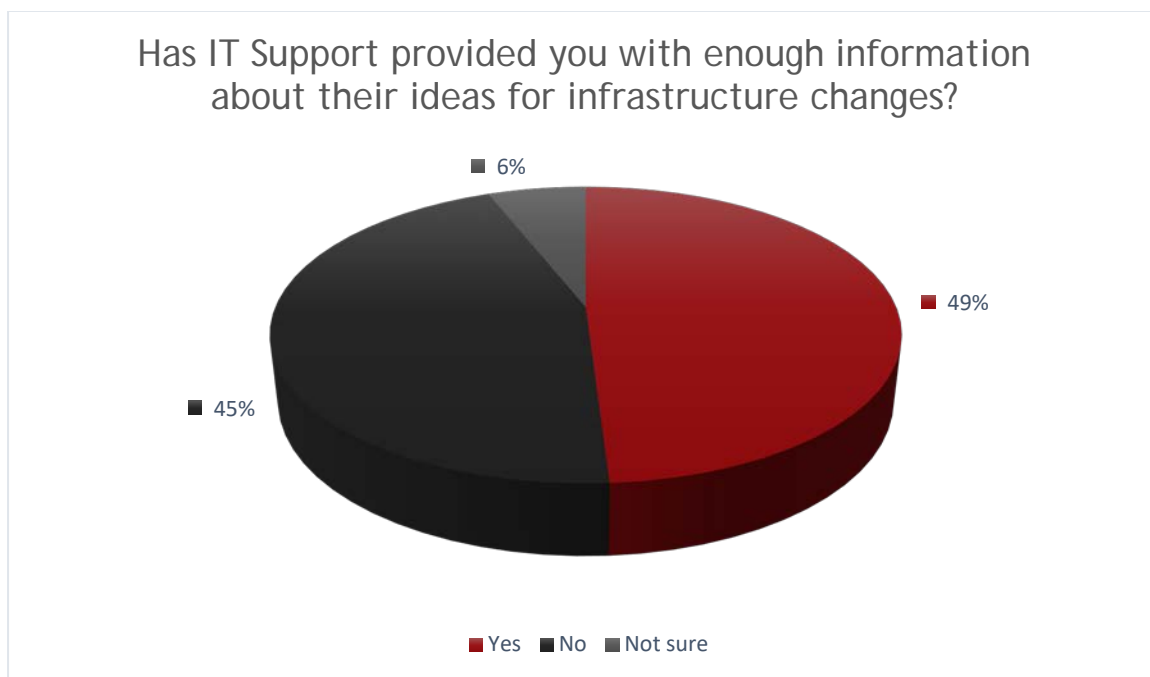

"The servers contain a lot of important data and files. If these were lost, Red Opal would have to close down."

"The HR system stored on the servers contains ALL of the data about employees, including personal details, contract start and end dates, annual and long service leave entitlements, as well as our policies to name a few. This is all mission critical data."

"If project files and media assets are lost, these will have to be recreated from scratch. This would waste a lot of time and money."

"If the finance system goes down, ROI won't be able to do transactions and critical data could be lost."

Chart 6: Information provided by IT Support

Additional questions

What critical business processes are undertaken by your business area?

The Human Resources system covers the following processes:

- Recruitment
- Managing leave
- Calculating hours worked for payroll
- Managing leave requests, etc.

The Multimedia department produces and completes projects for clients.

The Accounts system covers the following processes:

- Paying invoices
- Sending invoices
- Reconciling payments
- Employee payroll.

Do you have any questions, comments, concerns or recommendations for this idea?

"As usual a proper plan is needed to ensure the smooth transition to virtual servers."

"If the HR server is to be upgraded, this needs to be done as a Pilot so that we have access to the existing system and can smoothly cutover to the new one without any downtime."

"What plans are in place to ensure that data/files on the server aren't lost?"

"Any upgrades to the finance system need to be done carefully. These changes also need to be done over the weekend as the finance system is in use Monday to Friday."
